

GigaGrind Beta – What to look for (send bugs to joe@gigagrind.com)

Responsiveness and How it Looks

Responsiveness (Scalability for Mobile and Desktop) - This site should be fully responsive. That means that the site should be easily viewable on a mobile device as well as a laptop. If not, let me know which page, or in which circumstance it breaks.

Syntax Errors

The site SHOULD be free of syntax errors. I used PHP, MySQL, AJAX, JavaScript, jQuery, HTML, and CSS3 to code this site. If you encounter any actual syntax errors visible to the page, please take a screenshot and explain to me what was done for the error to occur.

Accessibility

Company Profile Editing Features and Game Editing Features should not be accessible to Candidates, and vice versa. If you find yourself somewhere you're not supposed to be, let me know the details of how you ended up there.

Form Submissions

This goes with Syntax Errors, but I wanted to clarify that most errors come with form validation. Sometimes a character is sent that breaks stuff. Other times, forms just plain don't work. Just document what you did when the error occurred.

Broken Site

If something just seems completely broken, you can submit that to me as well. Thanks.
